Saginaw, MI. (September 24, 2009) – SpeedNet, LLC, a leading broadband provider in Michigan unveiled its wireless backhaul network for local Information Technology Executives in the Education, Health, Information Technology Consultants and Government fields at the newly opened Harvey's restaurant in Saginaw. The event was co-hosted by Redline Communications, a leading provider of broadband wireless access and backhaul products.

SpeedNet has invested millions of dollars building its high capacity network throughout Mid Michigan. Prior to SpeedNet's investment, commercial customers only had expensive fiber or telephone company networks to purchase network capacity. SpeedNet can meet all bandwidth needs of local commercial customers by providing the high capacity circuits utilizing its private wireless microwave backhaul network.

SpeedNet's high capacity circuits provide synchronous connections to the end user which is more efficient for their business. "For companies looking for an alternative to the high bandwidth circuits provided by the Telco's and cable companies, SpeedNet is in a unique position to provide a lower cost alternative that provides the stability the customers have come to expect," said Randy Valentine SpeedNet's Technical Operations Manager.

Introducing SpeedNet's unique position to provide high capacity bandwidth at cost effective pricing was the primary purpose of hosting the event. "SpeedNet has built a world class microwave backhaul network throughout Mid Michigan, and we were very pleased to introduce it to our business partners," said Bruce Moore SpeedNet's Vice President and General Manager. "SpeedNet's network is positioned to provide private network point to point connectivity as well as back-up capacity for Mid Michigan commercial customers. The network has been built with carrier class technology that is extremely reliable. We are looking to create win /win relationships to drive cost effective solutions," said Moore.
